The Kenan Advantage Group to Outfit Fleet with Oil Purification Systems' OPS-1 Oil Refiner System
Shelton, CT, October 03, 2006

North America's Largest Independent Fuels Delivery Carrier Rolls Out Product on New 2006 Fleet for First Phase of Implementation

Shelton, Conn. - October 3, 2006 - Oil Purification Systems (www.ops-1.com), developer and manufacturer of the OPS-1 on-board oil refiner system, today announced that The Kenan Advantage Group, (www.thekag.com), the largest independent fuels delivery carrier in North America, is outfitting its fleet with the OPS-1 system, beginning with installation on all new 2006 vehicles. The OPS-1 system will significantly extend vehicle oil change intervals, enabling Kenan to reduce its oil-related costs by approximately 60 percent.

"Making the decision to outfit all of our new vehicles with the OPS-1 system was an easy one," said R.J. Molder, vice president of fleet services at Kenan. "We were able to perform a very thorough evaluation, including oil analyses, in only about three months. When our research showed us how substantial our savings would be, and we reviewed the list of OPS customers who are already experiencing similar results, we knew we couldn't afford to wait." Molder continued, "Improving margins by finding efficiencies is key to our success, so we move aggressively when technology of this magnitude comes along."

The Kenan Advantage Group chose the OPS-1 system after completing a successful evaluation on vehicles in its Canton, Ohio and Tampa, Fla. locations. Kenan performed oil analyses on four vehicles after 25,000 mile intervals. In all cases, oil samples came back "clean" at each interval. When the lab results showed that the vehicles still did not need oil changes at 50,000 miles, the company quickly made the decision to roll out the product on the newest vehicles in the fleet. Kenan has begun an aggressive program to outfit its fleet of 2,000 trucks with OPS-1 units. For the first phase of implementation, the company is installing the OPS-1 system on its new 2006 vehicles at the factory or dealership.

Mitchell Weseley, president and CEO of Oil Purification Systems said, "The Kenan Advantage Group is a recognized industry leader with a reputation for seeking out innovative technologies that support business growth. We are pleased that Kenan has identified the OPS-1 system for the operating efficiencies that it delivers, and ultimately its direct contribution to improving the bottom line."

The OPS-1 is an on-board oil refiner system that can be easily mounted on a broad range of vehicle and industrial engines. By removing the solid and liquid contaminants from engine oil, the OPS-1 virtually eliminates the need for oil changes. The OPS-1 is used by hundreds of fleets on thousands of vehicles and generators in trucking, busing, construction, mining and many other applications. Weighing only 11 pounds, the OPS-1 is a compact, two-piece system that can be split up for easy installation on the engine.

About The Kenan Advantage Group

Headquartered in Canton, Ohio, The Kenan Advantage Group (KAG) is the largest independent fuels delivery carrier in North America. The company locally delivers refined petroleum products, including gasoline, diesel and aviation fuels to customers. With its short-haul, "last mile" delivery of refined petroleum products from pipelines and refineries to gasoline stations, fuel marketers and other end users, Kenan provides a vital link in the country's energy distribution network. Since 2000, the company has expanded from 14 to 32 states and extended its infrastructure with six acquisitions and 17 private fleet conversions. In 2005, the network distributed approximately 260 billion gallons of refined petroleum products in the United States. With approximately

\$525 million in revenue in 2005, The Kenan Advantage Group is nearly six times larger than any other competitor.

About Oil Purification Systems

Oil Purification Systems, Inc. (OPS) manufactures the OPS-1 oil refiner system which allows engines to run with clean oil by eliminating solid and liquid contaminants from engine oil and hydraulic fluid. By extending the useful life of engine oil, customers are able to enjoy less downtime, greater productivity, significantly lower oil maintenance expenses, and longer engine life. Founded in 2002, OPS is headquartered in Shelton, Conn. and has production facilities in Bradenton, Fla. For more information, please call 866-645-7873 or visit <http://www.ops-1.com>.
