

GigaTrust Announces Thin Client Support for Microsoft Windows RMS

GigaTrust supports the viewing of Windows Rights Management Services (RMS) for Windows Server 2003 protected content for users outside the enterprise without the installation of a large client or the need for administrator rights.

HERNDON, VA. February 7, 2007—GigaTrust, a leading provider of Cross Enterprise Rights Management products including persistent content protection and authentication services, today announced thin client support for viewing Windows RMS-protected email and email attachments. In addition, GigaTrust has announced two new products, GigaTrust for Dynamic File Folders and GigaTrust Email Archive for Exchange Server.

“GigaTrust is proud to announce the enhancement of our external user provisioning capabilities by allowing users outside the enterprise to easily view Windows RMS-protected content without the need for administrative rights or installing a large client”, said Bob Kellogg, Vice President of Technology, GigaTrust. “The addition of this feature to our already robust external user provisioning capabilities gives our customers flexibility when distributing content outside their company.”

“Customers have told us that in today’s environment they need the ability to share protected content with external business partners,” said Peter Houston, senior director of marketing for identity and access at Microsoft Corp. “GigaTrust offers a solution to view Windows RMS-protected information outside the enterprise with a small footprint client that enforces the author’s assigned rights.”

When a business partner receives Windows RMS-protected information they simply click on a link, enter their credentials, and view the email or attachments in an ActiveX control or a Java Applet. This allows the business partner to easily view the protected information. In addition, the author retains the ability to dynamically revoke protected content and track the usage of the content through GigaTrust Report Services.

GigaTrust Corporation, a Microsoft-certified Gold Partner, will be exhibiting at the 2007 RSA Conference in San Francisco, CA February 5 – February 9, 2007 in Microsoft Corporation’s Partner Pavilion booth #25.

About GigaTrust:

GigaTrust, A Microsoft-certified Gold Partner and leading provider of trusted cross enterprise solutions, extends Windows Rights Management (RM) to people outside the enterprise. GigaTrust allows smaller businesses to use RM without investing in costly infrastructure upgrades. Additional features include automatic protection, PDF support, dynamic revocation, compliance reporting, and the indexing of protected content as it is archived. GigaTrust extends Windows RM to BlackBerry, Macintosh, and Linux. For more information about GigaTrust, visit us at www.gigatruster.com or contact mediarelations@gigatruster.com.
